

How to Run the project given in the Assignment

- For Development of the API's Django Framework is used.
- Open The Assignment Folder with any IDE
- Create Virtual Environment (Python Version == 3.13.0)
- Install the requirements for the project from requirements.txt file
`pip install -r requirements.txt`
- In the .env file enter the credentials of your database. Use MySQL Database.
Make sure the MySQL server is running in the background.
- Navigate to Instahyre directory
`cd Instahyre`
- Make Migrations. Use Below commands.
`python3 manage.py makemigrations`
`python3 manage.py migrate`
- I have created a script to automatically populate the data for future testing. The file is present at this path
{Assignment/Instahyre/api/management/commands/populate_data.py}
Run the below command to start the automation
`python3 manage.py populate_data`
- Now run the project with the below command
`python3 manage.py runserver`
- If all the steps are correctly followed the project will be up and running.
- To test the API's import the Instahyre.postman_collection.json file in Postman.
The file will be attached in the mail. Change your environment url according to your system.
- Please Note the Authorization Token will be created in login api under the key "access"
- In header the key is Authorization and the value is Bearer <access token>
Eg. Bearer eyJhbGciOiJIUzI1NiIsInR5cCI6IkpXVCJ9JGwweyfgjhbweyfgkbjawefjh
